About this Document

This Reference Guide explains the McAfee® TrustedSource™ Web Database, XL and TS versions.

Note: The TrustedSource Web Database was previously called SmartFilter Internet Database and Control List.

This guide is helpful for:

- **Customers** – Customers using the TrustedSource Web Database, using McAfee web products, looking for detailed category information to help design policies and analyze reports, or upgrading from a previous version of the McAfee SmartFilter Internet Database or Control List.
- **Administrators** – System administrators using the SmartFilter pattern feature or importing custom site files.
- **Developers** – OEM developers using the SmartFilter Control List SDK or SmartFilter Category Server.

The Reference Guide assumes you have a working knowledge of:

- McAfee SmartFilter®, McAfee Web Gateway (*formerly Webwasher®*), McAfee Web Protection Service, or another OEM product that uses the TrustedSource Web Database.
- McAfee reporting software – McAfee Web Reporter, McAfee SmartReporter®, or McAfee Content Reporter.
- Internet and its terms and applications.

Additional information is at the following locations:

- **Support** – Visit mysupport.mcafee.com for product documentation, announcements, and support.
- **URL categorization, reputation checker, and TrustedSource** – visit www.trustedsource.org.

Conventions

Refer to the next table for a list of the text conventions used.

Table 1 Conventions

Convention	Description
Courier bold	Identifies commands and key words you type at a system prompt Note: A backslash (\) signals a command that does not fit on the same line. Type the command as shown, ignoring the backslash.
<i>Courier italic</i> <Courier italic> nnn.nnn.nnn.nnn	Indicates a placeholder for text you type When enclosed in angle brackets (< >), identifies optional text Indicates a placeholder for an IP address you type
Courier plain	Used to show text that appears on a computer screen
<i>Plain text italics</i>	Identifies the names of files and directories Used for emphasis (for example, when introducing a new term)
Plain text bold	Identifies buttons, field names, and tabs that require user interaction
[]	Signals conditional or optional text and instructions (for example, instructions that pertain only to a specific configuration)
Caution	Signals be careful—in this situation, you might do something that could result in the loss of data or an unpredictable outcome.
Note	Used for a helpful suggestion or a reference to material not covered elsewhere in the guide

Table 1 Conventions (continued)

Convention	Description
Security Alert	Identifies information that is critical for maintaining product integrity or security
Tip	Indicates time-saving actions; may help you solve a problem

Note: The IP addresses, screen captures, and graphics in this document are for illustration purposes only. They are not intended to represent a complete or appropriate configuration for your specific needs. Features may be enabled in screen captures to make them clear; however, not all features are appropriate or desirable for your setup.

Acronyms

The next table lists acronyms that are used throughout this document.

Table 2 Acronyms

Acronym	Description
AVI	Audio Video Interleave
IP	Internet Protocol
IRC	Internet Relay Chat
ISP	Internet Service Provider
IT	Information Technology
MMS	Multimedia Message Service
MPEG	Moving Picture Experts Group
MP3	MPEG-1 audio layer 3
NGO	Non-Governmental Organization
NRA	National Rifle Association of America
OEM	Original Equipment Manufacturer
OS	Operating System
P2P	Peer-to-Peer
PDA	Personal Digital Assistant
SDK	Software Development Kit
SMS	Short Message Service
SUV	Sport Utility Vehicle
TCP	Transmission Control Protocol
URL	Uniform Resource Locator
VoIP	Voice Over Internet Protocol
WAP	Wireless Application Protocol
WAV	Waveform audio format

1 Introduction to TrustedSource Web Database

The McAfee® TrustedSource™ Web Database (hereafter TrustedSource Web Database) contains URLs (web pages) organized into categories to be used in filtering policies to manage access to the web. The XL version of the database introduced “web reputation.” Now, URLs in the database have their web reputation and category information. In addition, the XL Database introduces the use of category sets as a means to release new categories.

The TrustedSource Web Database is available for use with McAfee web products and web reporting software.

Contents

[Category sets](#)

[URL categorization](#)

[TrustedSource web reputation](#)

[How to request a change of category](#)

Category sets

To manage category changes to the TrustedSource Web Database, McAfee uses category sets. As McAfee adds, removes, or changes categories, the changes are tracked as part of a new category set within the TrustedSource Web Database.

Category set 1 – The initial set defined for the XL Database; comprised of 91 categories.

Category set 2 – The second set defined for the XL Database; comprised of 96 categories.

Category set 3 – The third set defined for the XL Database; comprised of 96 categories.

Category set 4 – The fourth set defined for the XL Database; comprised of 104 categories.

To determine which category set your product uses, compare category names with those listed in a category set. For example, category set 1 contains a category named Dating/Social Networking that is split into three categories in category set 2: Dating/Personals, Professional Networking, and Social Networking. Customers with products using category set 1 see only the Dating/Social Networking category. Customers with products using category set 2 see the three new categories.

McAfee notifies customers and partners by email if they are using products that will be upgraded to the latest category set.

For more information, see:

- [Category Set Changes on page 15.](#)
- [Category set 4 considerations on page 16](#)
- [Category sets table on page 77](#)

URL categorization

The TrustedSource Web Database uses categories to organize similar types of URLs into groups based on the content of the web page. For example, www.mcafee.com, www.trustedsource.org, and www.webwasher.com are grouped into the Business category.

The categorization of a particular URL is a defined process using objective standards and definitions. To gather and rate potential websites, McAfee uses various technologies, artificial intelligence techniques, such as link crawlers, security forensics, honeypot networks, sophisticated auto-rating tools, and customer logs. Our international, multi-lingual Web Analyst team reviews candidate sites, then adds the URLs to the database.

In some cases, one URL will be in more than one category due to overlapping content. For example, www.mcafee.com and www.trustedsource.org are in the Business category. However, the two websites also contain software and hardware information. Therefore, they are also in the Software/Hardware category.

By focusing on URL categorization, the TrustedSource Web Database provides an accurate database that allows more flexible and precise categories for use in filtering policies and reporting applications.

For a complete list of categories and their descriptions, see [Chapter 3, Category Descriptions](#).

TrustedSource web reputation

The TrustedSource system determines what is good and bad behavior on the Internet by continuously analyzing worldwide behavior and the sending patterns for email, web activity, malware, and computer-to-computer behavior. From that data, TrustedSource dynamically calculates reputation scores that represent the risk to your network when you visit a web page. The result is a database of reputation scores for IP addresses, domains, specific messages, URLs, and images.

The TrustedSource Web Database is created from this information about reputations, volumes, trends, and real-time analysis of distributed content to provide maximum protection against today's blended threats.

For more information about TrustedSource, visit the website at www.trustedsource.org.

Determining TrustedSource web reputation

To determine a TrustedSource web reputation for each URL, TrustedSource uses an automated process that looks at many different security attributes of that URL - the URL's content, where the URL is showing up on the Internet, the URL's domain behavior, and more. TrustedSource determines a score that represents the risk to your network, computers, and personal information when you visit any URL. The reputation score is represented in the database regardless of its categorization status. This means a URL can have a web reputation score, but is not in any category.

Reputation scores

The reputation score is similar to a credit score; it indicates the risk when visiting any URL. A higher score represents a higher risk.

Reputation scores are incorporated into the TrustedSource Web Database to give additional protection while you conduct business on the web. You can use this information to filter sites depending on their reputation score.

Reputation scores have the following ratings:

Table 3 Reputation scores

Risk	Color	Web reputation score
Minimal	Green	Less than 15
Unverified	Grey	15 or more, but less than 30
Medium	Yellow	30 or more, but less than 50
High	Red	50 or more

How to request a change of category

TrustedSource.org provides a tool for checking a URL's category and web reputation, and a ticketing system for suggesting changes of category. Use the TrustedSource.org URL-checking tool for the current XL Database and any of our legacy products, including URL lists for McAfee Web Gateway and NetCache with DynaBlocator.

Note: If you have a question or comment about the web reputation of a URL, send an email to sites@mcafee.com with the information.

Use TrustedSource.org, and enter one or more URLs to:

- Check the status of a specific site - whether it is in a category.
- Check the category of a site.
- Check the reputation of a site.
- Suggest changes to the category of a URL in the TrustedSource Web Database.
- File a ticket to track the progress of your category change request.
- Submit up to 100 URLs per day for category changes.

Change requests sent through www.trustedsource.org can receive an automated response if you are logged on to your TrustedSource.org account when you submit the request. You can register for a free account on the TrustedSource.org website. On average, it takes less than one business day to review these requests and update the database.

Note: To check more than 100 URLs per day and receive a more detailed report of the action taken on those URLs, submit your URL list via email.

For more information, see:

- [Obtaining a TrustedSource.org account on page 11.](#)
- [Checking URLs via email on page 13.](#)

Why you need a TrustedSource.org account

You must register for a free TrustedSource.org account to:

- Submit a URL list file with up to 100 URLs for checking.
- Track the status of your change request.
- Receive an automated response about your change request.
- Access additional features on TrustedSource.org.

Obtaining a TrustedSource.org account

- 1 Go to www.trustedsource.org.
- 2 Scroll down to the **Login** window on the left side of the TrustedSource.org home page.
- 3 Click the **Create Account** link.
- 4 Type information in the **Registration Form** and click **Create Account**.

A validation email is sent to the email address you supplied in the Registration Form.

- 5 When you receive the email, click the supplied link to activate your account.

You can now log on to TrustedSource.org.

Checking URLs with TrustedSource.org

- 1 Type www.trustedsource.org in the address field of your Internet browser.
- 2 From the navigation bar at the top, select **Feedback**, and click either **Check Single URL** or **Check URL List File**.

Note: To use the Check URL List File option and additional features on this site, you must log on with your TrustedSource.org account.
- 3 From the **Please select the product you are using** menu, select your version:
 - **McAfee SmartFilter XL** – for category set 3 information.
 - **McAfee SmartFilter 4.2 (XL-1)** – if you are using SmartFilter 4.2 and higher.
 - **SmartFilter v4** – if you are using SmartFilter 4.0 and 4.1.x.
 - **McAfee Web Gateway (Webwasher)**
 - **McAfee Web Protection Service** – if you are using McAfee Web Protection Service.
 - **McAfee SiteAdvisor Enterprise** – if you are using McAfee SiteAdvisor Enterprise.
 - **McAfee Real-time Database** – if you are using McAfee Real-Time Database.
- 4 Type the URL(s) with or without the preceding `http://` (for example, you can type either `http://www.mcafee.com` or `www.mcafee.com`).
 - To check a single URL, type a URL in the field.
 - To check a URL file, upload a plain text file by clicking **Browse** and selecting the file.
- 5 Click **Check URLs** or **Check URL List**. The Search Results page shows the status, category, and reputation of the URL(s).

Tip: If a URL is not categorized, the status is "Uncategorized URL" and the only additional information is that URL's reputation.
- 6 To suggest changes to the category of a URL:
 - a Select up to three change suggestions from the lists.

Tip: To suggest categories for more than one URL, type the URL and the suggestions into the **Optional comment** field.
 - b Optionally, type a comment in the **Optional comment** field.
 - c Click **Submit URL for Review** or **Submit selected URLs for Review**. The E-mail Notification window appears with a ticket ID number.
 - d On the E-mail Notification window, select the check box next to the required option(s) for receiving an automated notification:
 - **Send me an email when the URL switches to 'Open' status**
 - **Send me an email when the URL switches to 'Reviewed' status**
 - **Send me an email when the URL switches to 'Closed' status**
 - e Verify the correct email address is in the **To** field, and type any additional email addresses in the **To** or **CC** fields.

Note: For multiple recipients, separate email addresses with a comma.
 - f Click **Submit**. You will receive an email notification according to the automated notification selection(s) you made.

Checking URLs via email

If you are concerned about the web reputation of a URL, have further questions to a ticketing system request, or if you want to submit more than 100 URLs a day or multiple log files, you can email **sites@mcafee.com**.

URLs received at this address are reviewed by the TrustedSource Web Analyst team and added to the TrustedSource Web Database, if previously uncategorized, or might be categorized as you suggested. Inquiries will receive a response from the TrustedSource Web Analyst team as they are reviewed. If you send only a few URLs, you will receive a response on the action taken for each URL. If you send a large number of URLs or log files, you will receive only an email confirming that the sites will be reviewed — you will not receive a response detailing the action taken on each URL.

Note: The team tries to respond promptly to a request, however, response time varies based on the volume of email we receive. For immediate attention, use the automated TrustedSource.org URL ticketing system.

2 Category Set Changes

This chapter describes the changes you might need to make to policies in McAfee web products when using a new category set. Further information about the category changes includes:

- New categories.
- Categories that are split into additional categories for finer granularity.
- Changes to category names.

Contents

[Guidelines for your McAfee web product](#)

[Category set 4 considerations](#)

[Category set 3 considerations](#)

[Category set 2 considerations](#)

[Category set 1 considerations](#)

Guidelines for your McAfee web product

The URL filtering policies in McAfee Web Gateway (*formerly Webwasher*®), McAfee SmartFilter®, or McAfee Web Protection Service might be impacted when new categories are released or when existing categories are modified. Follow these guidelines when using the latest category set.

McAfee Web Gateway

McAfee Web Gateway uses a dynamic list of categories. Therefore, when a new version or category set (known as a category scheme) is released, McAfee Web Gateway is upgraded to the new categories and category changes. Refer to the McAfee Web Gateway product documentation for more information about supported category sets.

When categories are added to McAfee Web Gateway, they are automatically assigned the default action for new categories. Administrators have two options:

- **Use the default action for new categories**

To view or change this setting, go to **URL Filter** tab > **Category Actions** > **Default Action for new categories**. Any changes made to this setting are applied to future updates and upgrades to category schemes.

- **Change actions for new categories**

To change the action for new categories, you need to change the action in **each policy** you have configured in McAfee Web Gateway. Changing the action for a new category in one policy does not change it in all policies.

- a From the **URL Filter** tab, select **Category Actions**.
- b Locate the new categories and make the changes.
- c Click **Apply Changes**. The changes are applied.

For more information, see the McAfee **Web Gateway** documentation at mysupport.mcafee.com/Eservice/productdocuments.aspx.

McAfee SmartFilter

McAfee SmartFilter uses category set 1.

Category set 1 and earlier

SmartFilter 4.2 and 4.2.1 use the XL Database, category set 1. When you upgrade from a previous version of SmartFilter, adjust your policies to take advantage of the new categories. SmartFilter administrators have two options:

- **Use a default policy**

The default policies provide filtering needs for multiple situations in any organization. For more information about category settings within each default policy, see Appendix A in the *SmartFilter Administration Guide*. Review each policy and select which one best suits your organization's needs.

To use a default policy:

- a From the SmartFilter Administration Console plug-in, go to **Apply Policies > Default Policy**.
- b From the **Default Policy** drop-down list, select a default policy.
- c Make any additional required changes.
- d Click **OK**. Changes are applied.

- **Edit existing policies**

To preserve your current policy yet incorporate the new categories and changes to old categories, you can edit an existing policy.

- a From the SmartFilter Administration console plug-in, go to **Create Policies > Policies**.
- b Select the required existing policies, and click **Customize**.
- c On the **Categorization** and **Delay** tabs, make the required changes.
- d Click **Close**. The changes are saved.

For information about category changes from previous versions, see:

- [Upgrading from SmartFilter 4.1.x on page 20](#)
- [Upgrading from SmartFilter 4.0.x on page 21](#)
- [Upgrading from SmartFilter 3.x on page 23](#)

For more information, refer to the **SmartFilter** documentation at mysupport.mcafee.com/Eservice/productdocuments.aspx.

McAfee Web Protection Service

Category set 4 is available for Web Protection Service. Web Protection Service automatically updates to the latest category set available. There are no additional guidelines to consider for this product.

Category set 4 considerations

When your XL Database category set is upgraded to category set 4, there are new categories to consider. Use the information in this section to take advantage of the categories.

New categories in Category set 4

The following categories are now available in the XL Database, category set 4:

- Browser Exploits
- Consumer Protection
- Illegal UK
- Major Global Religions
- Malicious Downloads
- PUPs

Category changes since Category set 3

The next table lists the names of categories in category set 3 that have been removed from category set 4.

If your URL-filtering policies have any of the following category set 3 categories, read the information in the table to determine how this affects existing URL filtering policies and what action to take.

Table 4 Names of categories in set 3 removed from category set 4

Previous category	Category Set 4	What changed
Criminal Activities	Potential Criminal Activities	The category has been renamed with a more accurate description.
Hacking/Computer Crime	Potential Hacking/Computer Crime	The category has been renamed with a more accurate description.
Hate/Discrimination	Discrimination	The category has been renamed with a more accurate description.
Illegal Software	Potential Illegal Software	The category has been renamed with a more accurate description.
Malicious Sites	Split into: <ul style="list-style-type: none">• Malicious Downloads• Malicious Sites• Browser Exploits	The previous category has been split so that the browser exploits are in a separate category.
Religion/Ideology	Split into: <ul style="list-style-type: none">• Religion/Ideology• Major Global Religions	The previous category has been split so that the traditional, major global religions are in a separate category.
Spyware/Adware	Split into: <ul style="list-style-type: none">• Spyware/Adware/Keyloggers• PUPs	The category has been renamed with a more accurate description. The previous category has also been split so that potentially unwanted programs are in a separate category.

Category set 3 considerations

When your XL Database category set is upgraded to category set 3, there are new categories to consider. Use the information in this section to take advantage of the categories.

New categories in category set 3

The following categories are now available in the XL Database, category set 3:

- Controversial Opinions
- Residential IP Addresses

Category changes since category 2

The next table lists categories from category set 2 that have been removed from category set 3, and the revised categories for the URLs.

If your URL filtering policies have any of the categories, read the information in the table to determine how this affects existing URL filtering policies and what action to take.

Table 5 Names of categories in set 2 removed from category set 3

Previous category	Category Set 3	What changed
Usenet News	Not in category set 3	All URLs previously in the Usenet News category are now in the Forums/Bulletin Boards category to accommodate more accurate filtering.
History	Not in category set 3	All URLs previously in the History category are now in the Education category to accommodate more accurate filtering.

Category set 2 considerations

When your XL Database category set is upgraded to category set 2, there are new categories to consider. Read the information in this section to take advantage of the categories.

New categories in category set 2

The following categories are now available in the XL Database, category set 2:

- Dating/Personals
- Professional Networking
- Text Translators
- Motor Vehicles
- Social Networking
- Web Meetings

Category changes since category 1

The next table lists categories from category set 1 that have been split into additional categories in category set 2. The additional categories give more granular categories that allows organizations to create URL policies that better fit their needs.

If your URL-filtering policies have any of the following categories, read the information in the table to determine how this affects existing URL filtering policies and what action to take.

Table 6 Names of categories in set 1 split into additional categories in category set 2

Category Set 1	Category Set 2	What changed
Dating/Social Networking	Split into: <ul style="list-style-type: none"> Dating/Personals Professional Networking Social Networking 	To provide more targeted filtering, Dating/Social Networking has been split into these categories. For example, businesses can allow access to URLs in the Professional Networking category, but can block access to URLs in the Dating/Personals category.
Marketing/Merchandising	Split into: <ul style="list-style-type: none"> Motor Vehicles Marketing/Merchandising 	To keep the categories for motor vehicle sites consistent, and to provide more specific categories, we have moved motor vehicle URLs to the new category, Motor Vehicles. Note: No further changes were made to Marketing/Merchandising.
<ul style="list-style-type: none"> Education/Reference Interactive Web Applications 	Split into: <ul style="list-style-type: none"> Text Translators Education/Reference Interactive Web Applications 	The Text Translators category contains text translator-specific URLs that were previously in the categories of Education/Reference or Interactive Web Applications. The new Text Translator category allows businesses to design and implement policy actions that meet their business and compliance needs. Note: No further changes were made to Education/Reference or Interactive Web Applications.
Interactive Web Applications	Split into: <ul style="list-style-type: none"> Web Meetings Interactive Web Applications 	To enable businesses to allow web meeting sites while blocking interactive web applications sites, we have placed web meeting URLs in the new Web Meetings category. Note: No further changes were made to Interactive Web Applications.

Category set 1 considerations

This section applies to SmartFilter customers upgrading to SmartFilter 4.2 or 4.2.1 from previous versions. SmartFilter 4.2 or 4.2.1 uses the XL Database, category set 1. Refer to the section for your situation to find information that will be helpful after upgrading to SmartFilter 4.2.x.

Upgrading from SmartFilter 4.1.x

If you are upgrading from SmartFilter 4.1.x to SmartFilter 4.2.x using the XL Database, there are 20 new categories to consider. Read the information in this section to take advantage of the categories.

New categories

The following categories were not available in the v4 SL Control List:

Category name changes

- Blogs/Wiki
- Content Server
- Digital Postcards
- Fashion/Beauty
- Historical Revisionism
- Illegal Software
- Incidental Nudity
- Information Security
- Interactive Web Applications
- Internet Services
- Marketing/Merchandising
- Media Sharing
- Online Shopping
- Parked Domain
- Pharmacy
- Real Estate
- Recreation/Hobbies
- Restaurants
- Software/Hardware
- Technical Information

The next table lists the v4 SL Control List categories that have been renamed in the XL Database. If your previous policy used any of these categories, you might need to make changes to your policy. For more information, see the section [Category definition changes and considerations on page 21](#).

Table 7 SL to XL category name changes

SL category	XL category
Auction	Auctions/Classifieds
Dating/Social	Dating/Social Networking
Consumer Information	Public Information
Criminal Skills	Criminal Activities
Hacking	Hacking/Computer Crime
Hate Speech	Hate/Discrimination
Humor	Humor/Comics
Spam E-mail URLs	Spam URLs
Spyware	Spyware/Adware
Usenet News	Usenet News

Category definition changes and considerations

The next table lists categories that have been changed. If your policies have any of the following categories, read the following information to determine if you need to make changes.

Table 8 Category considerations for SL Control List users

SL category	XL category	Guidelines
Computing/Internet	Split into: <ul style="list-style-type: none"> Content Server Interactive Web Applications Information Security Internet Services Software/Hardware Technical Information 	To provide more specific definitions based on security risks, Computing/Internet has been split into these categories. For example, Information Security can be allowed in businesses, but blocked in schools.
From: <ul style="list-style-type: none"> Criminal Skills Hacking 	Split into: <ul style="list-style-type: none"> Criminal Activities Hacking/Computer Crime Illegal Software 	These new categories provide greater flexibility over what you allow or block.
Entertainment/Recreation/Hobbies	Split into: <ul style="list-style-type: none"> Entertainment Recreation/Hobbies Digital Postcards 	These new categories provide greater flexibility over what you allow or block.
Nudity	Split into: <ul style="list-style-type: none"> Incidental Nudity Nudity 	This category addresses cultural or geographic differences in opinion about nudity. Many customers might want to block access to nudity, but allow access when it is not the primary focus of a site such as news sites or major portals.
Personal Pages	Split into: <ul style="list-style-type: none"> Blogs/Wiki Media Sharing Personal Pages 	These new categories provide greater flexibility over what you allow or block.
Shopping/Merchandizing	Split into: <ul style="list-style-type: none"> Fashion/Beauty Marketing/Merchandising Online Shopping Pharmacy Real Estate Restaurants 	These new categories provide greater flexibility over what you allow or block.

Upgrading from SmartFilter 4.0.x

If you are upgrading from SmartFilter 4.0.x to SmartFilter 4.2.x using the XL Database, there are 31 new category choices. Use the information in this section to take advantage of the categories.

New categories

The following categories were not available in the v4 SL Control List:

- Blogs/Wiki
- Content Server
- Digital Postcards
- Fashion/Beauty
- For Kids
- Information Security
- Interactive Web Applications
- Internet Services
- Marketing/Merchandising
- Media Sharing
- Phishing
- Real Estate
- Recreation/Hobbies
- Restaurants
- Spam URLs

Category Set Changes

Category name changes

The next table lists the category changes from v3.x Control List to the XL Database. If your previous policy used any of the following categories, you might need to adjust your policy.

Table 11 3.x to XL category changes

3.x category	XL category
Art and Culture	Art/Culture/Heritage
Dating	Dating/Social Networking
Humor	Humor/Comics
Investing	Stock Trading
Sex	Pornography
Usenet News	Usenet News
Webmail/Personal Communications	Web Mail

Category considerations for SmartFilter 3.x users

The next table lists the categories that have changed. If your policies use any of the following categories, read the following information to determine if you need to change them.

Table 12 Category information for SmartFilter 3.x users

Category	Change	Guidelines
Anonymizers/Translators	Split into: <ul style="list-style-type: none"> • Anonymizers • Anonymizing Utilities 	To prevent your users getting around your web-filtering policy, block both of these categories. To block the sites most used to get around web filtering while still allowing your users to translate web pages into foreign languages, block only <i>Anonymizers</i> .
Chat	Split into: <ul style="list-style-type: none"> • Chat • Instant Messaging • Forum/Bulletin Boards • Messaging 	This provides three different categories to control the web-based communication in your organizations. Opinions differ about which of these are dangerous and which are for productivity; therefore this allows you to decide.
Criminal Skills	Split into: <ul style="list-style-type: none"> • Criminal Activities • Malicious Sites • Phishing 	McAfee recommends that you block all of these.
Cults/Occult	Now: Religion/Ideology	There might be a risk in restricting some religions and not others. To block all religious sites, use the <i>Religion and Ideology</i> category. If you block <i>Cults/Occult</i> because of bad behavior, try some of the new categories, such as <i>Profanity</i> , <i>Violence</i> , <i>Hate Speech</i> , <i>Gruesome Content</i> , <i>Drugs</i> , <i>Provocative Attire</i> , or <i>Extreme</i> , to block offensive sites.
Extreme/Obscene/Violence	Split into: <ul style="list-style-type: none"> • Extreme • Violence • Profanity • Gruesome Content 	Extreme is the category for the most offensive sites in other categories. They are the very worst sites and you probably want to block them. We have split our original category into finer categories to give you greater control. For example, an elementary school is likely to block <i>Profanity</i> but a college or library might not.

Table 12 Category information for SmartFilter 3.x users (*continued*)

Category	Change	Guidelines
High Bandwidth	Split into: <ul style="list-style-type: none"> Media Downloads Internet Radio/TV Streaming Media 	This split allows you to fine-tune access to some kinds of traffic and block access to others.
Lifestyle	Not in XL	There might be a risk in blocking access to content on some lifestyles. However, to protect against sites containing offensive content, block <i>Pornography, Provocative Attire, Profanity, or Drugs</i> .
Mature	Split into: <ul style="list-style-type: none"> Alcohol Provocative Attire Profanity Sexual Materials Tobacco Weapons 	These new categories provide greater control over what is appropriate and not appropriate in your organization.
Nudity	Split into: <ul style="list-style-type: none"> Incidental Nudity Nudity 	This category addresses cultural or geographic differences in opinion about nudity. Many customers might want to block access to nudity, but allow access when it is not the primary focus of a site such as news sites or major portals.
On-Line Sales and Merchandising	Split into: <ul style="list-style-type: none"> Online Shopping Auctions/Classifieds Marketing/Merchandising 	Auction sites are usually deemed risks to productivity. Some use of shopping is common in many organizations.
Opinion, Politics, and Religion	Split into: <ul style="list-style-type: none"> Politics/Opinion Religion/Ideology 	For businesses, these are both productivity issues, but for some organizations, one might be more acceptable than the other.
Self-Help	Split into: <ul style="list-style-type: none"> Health Public Information 	These new categories provide greater flexibility over what you allow or block.

Category Set Changes

Category set 1 considerations

3 Category Descriptions

Contents

[About category descriptions](#)

[Alphabetical list of category descriptions](#)

About category descriptions

This chapter provides information about each category for all category sets, as explained in the following sections.

Category description

Detailed information about the type of URLs that are in the category.

Category combinations

When applicable, this section explains when a URL is in more than one category.

Example URLs

Lists examples of URLs that are in this category. The URLs change over time as the database changes.

Reference information

The table provides additional category information.

- **Short Name** – A two-letter code that identifies the category. The code is used in the SmartFilter Administration Console when creating policies and patterns. Each category has its own short name that does not change if the category name changes.
- **Category Code** – A three-digit code used in the SDK to identify a category. This code is useful for OEMs and programmers. In addition to available SmartFilter categories, category codes 500-599 are reserved to support user-defined categories of URLs using the Custom Site, Custom Search Keyword, and Pattern features.
- **Risk Group** – The main risk from this category of URLs. Risk groups can help identify changes that need to be made with web-filtering policies and can be used in reporting. Each category is in one of the following risk groups:
 - **Bandwidth** – Web pages that feature content that consumes a large amount of bandwidth (such as streaming media or large files), which might affect the business-related flow of data on the network.
 - **Communications** – Web pages that allow direct communication with others through the web browser.
 - **Information** – Web pages that allow users to find information that might not be pertinent to their business or education.
 - **Liability** – Allowing users to view web pages in this category might be criminal or lead to lawsuits by other employees.
 - **Productivity** – Non-business sites that users visit for entertainment, social, or religious reasons.
 - **Propriety** – Sites in this category are for mature users only.

Category Descriptions

Alphabetical list of category descriptions

- **Security** – Web pages that are a source of malware, which can damage computer software, get around network policies, or leak sensitive data.
- **Functional Group** – A group name that is used in the McAfee Web Gateway interface for selecting categories. This group contains similar or related types of categories, making them easier to find.
- **Hierarchy** – The importance of categories within the database. A low number means low importance. A high number means high importance. If a URL is listed in more than one category, only the lower number (the most important) is used.
- **Category Set** – A number that indicates the category set for that category.

For more information, see [Category Tables \(Sorted\)](#) on page 87.

Further risks

When applicable, this section describes other risks from this category. For example, the P2P/File Sharing category is a security risk but access to websites in this category might also affect bandwidth.

Related categories

When applicable, this section provides links to further information.

Alphabetical list of category descriptions

Alcohol

Web pages that mainly sell, promote, or advocate the use of alcohol, such as beer, wine, and liquor. This category also includes cocktail recipes and home-brewing instructions.

Category combinations

The Business category can be used as an exception category to allow access to alcohol-related sites that focus on the business aspect.

Example URLs

- <http://www.wine.com>
- <http://www.absinthe.bz>
- <http://www.barmeister.com>

Reference information

Short Name	Category Code	Risk Group	Functional Group	Hierarchy	Category Set
al	101	Propriety	Drugs	32	1,2,3,4

Further Risks

None.

Related categories

[Business](#)

Anonymizers

Web pages that purposefully allow users to browse the web by hiding their IP address, or other personal identification information, in order to bypass local filtering policies and access any web page.

Category Descriptions

Alphabetical list of category descriptions

Anonymizer web pages also block any tracking technologies, such as cookies or browser history. Some methods also prevent OS version and web page history from being forwarded to the web page.

This category includes pages that provide free proxy IP addresses or describe how to bypass filtering.

This category does not include web pages that do not intend to hide a user. See the Anonymizing Utilities category.

Category combinations

None

Example URLs

- <http://www.anonymizer.com>
- <http://www.megaproxy.com>
- <http://www.boingboing.net/censorroute.html>
- <http://www.hidemyass.com>
- <http://www.anonymizer.secuser.com>

Reference information

Short Name	Category Code	Risk Group	Functional Group	Hierarchy	Category Set
an	102	Security	Risk/Fraud/Crime	42	1,2,3,4

Further Risks

URLs in this category allow users to gather information, download media, access offensive or illegal sites, and take many other actions that cause bandwidth, liability, and productivity issues.

Related categories

[Anonymizing Utilities](#)

Anonymizing Utilities

Web pages that result in anonymous web browsing without the explicit intent to provide such a service.

This category includes URL translators, web-page caching, and other utilities that might function as anonymizers, but without the express purpose of bypassing filtering software.

This category does not include text translation, because it is different from URL translation. Text translation requires a user to type a word, phrase, or block of text into an input field for translation, not a URL. Text translation is in the Text Translators category.

Category combinations

Sites that offer *both* URL translation and text translation might be in this category and the Text Translators category.

Example URLs

- <http://www.babelfish.yahoo.com>
http://www.babelfish.yahoo.com/translate_url
- <http://www.archive.org>
<http://web.archive.org/web/19961220001705/http://www1.playboy.com/>
- <http://translate.google.com/translate>
<http://translate.google.com/translate?u=http%3A%2F%2Fwww.playboy.com&langpair=en%7Cde&hl=en&ie=ASCII&oe=ASCII>

Category Descriptions

- http://www.worldlingo.com/en/websites/url_translator.html

Reference information

Short Name	Category Code	Risk Group	Functional Group	Hierarchy	Category Set
au	104	Security	Risk/Fraud/Crime	43	1,2,3,4

Further Risks

URLs in this category can cause bandwidth, liability, and productivity issues.

Related categories

[Text Translators](#)

Art/Culture/Heritage

Web pages that contain virtual art galleries, artist sites (including sculpture and photography), museums, ethnic customs, and country customs.

This category does not include online photograph albums. See the Media Sharing category.

Category combinations

- This category can be used with other categories to allow more flexibility in allowing or blocking content.
- Some URLs in this category might be in additional categories. For example, Navajo weaving is also in the Education/Reference category.

Example URLs

- <http://www.polkmuseumofart.org>
- <http://www.gamelannetwork.co.uk>
- <http://www.matsuoka-museum.jp>
- <http://www.stockholmsbriggen.se>

Reference information

Short Name	Category Code	Risk Group	Functional Group	Hierarchy	Category Set
ac	100	Information	Entertainment/Culture	113	1,2,3,4

Further Risks

None.

Related categories

[Media Sharing](#), [Education/Reference](#)

Auctions/Classifieds

Web pages that provide online bidding and selling of items or services.

This category includes web pages that focus on bidding and sales.

This category does not include classified advertisements such as real estate postings, personal ads, or companies marketing their auctions.

Category combinations

None

Category Descriptions

Alphabetical list of category descriptions

Example URLs

- <http://www.ebay.com>
- <http://sfbay.craigslist.org/sss/> (*://craigslist.org/sss)
- <http://www.bidz.com>
- <http://www.auction.co.kr>

Reference information

Short Name	Category Code	Risk Group	Functional Group	Hierarchy	Category Set
eb	158	Productivity	Purchasing	52	1,2,3,4

Further Risks

Online auctions are rarely monitored. Therefore these sites might expose users to material that are also in categories such as Pornography, Weapons, Nudity, or Violence.

Related categories

[Dating/Personals](#), [Real Estate](#), [Pornography](#), [Weapons](#), [Nudity](#), [Violence](#)

Blogs/Wiki

Web pages containing dynamic content, which often changes because users can post or edit content at any time.

This category covers the risks with dynamic content that might range from harmless to offensive.

Category combinations

Many blogs and wikis focus on a theme or subject. Therefore, this category is often used with others, such as Controversial Opinions, Education/Reference, Sports, Politics/Opinion, or Nudity, depending on the focus or subject of the site.

Example URLs

- <http://www.wikipedia.org>
- <http://blog.360.yahoo.com>
- <http://www.boingboing.net>

Reference information

Short Name	Category Code	Risk Group	Functional Group	Hierarchy	Category Set
bl	188	Productivity	Information/Communication	59	1,2,3,4

Further Risks

Some content might be offensive.

Related categories

[Controversial Opinions](#), [Education/Reference](#), [Sports](#), [Politics/Opinion](#), [Nudity](#)

Browser Exploits

Web pages containing browser exploits.

Category Descriptions

Alphabetical list of category descriptions

A browser exploit is a piece of code that exploits a software bug in a web browser so that the code makes the browser do something unexpected, including stop running, read or write local files, propagate a virus or install spyware. Malicious code may exploit HTML, JavaScript, Images, ActiveX, Java and other web technologies. Exploits, sometimes called drive-by-downloads, can install themselves on unprotected computers often without a consumer's knowledge, where the code can install keystroke loggers (to steal passwords) and Trojan programs (to turn a computer into a 'bot' or 'slave machine').

This category includes URLs that distribute or execute any browser exploit.

Category combinations

None.

Example URLs

Caution: For security, no examples are given.

Reference information

Short Name	Category Code	Risk Group	Functional Group	Hierarchy	Category Set
be	200	Security	Risk/Fraud/Crime	12	4

Further Risks

None.

Related categories

[Malicious Sites](#)

Business

Web pages that provide business-related information, such as corporate overviews or business planning and strategies.

This category also includes information, services, or products that help other businesses plan, manage, and market their enterprises. This category includes multi-level marketing ventures when the focus is on running the business.

This category does not include personal pages and web-hosting web pages.

Category combinations

This category can be used as an exception to allow access to sites that have a business focus, but might be in other categories such as Online Shopping, Web Mail, or Travel.

Example URLs

- <http://www.newpatientsinc.com>
- <http://www.adsi-fm.com/frames.html>
- <http://www.cat.com>

Reference information

- <http://www.myshoutbox.com>

Reference information

Short Name	Category Code	Risk Group	Functional Group	Hierarchy	Category Set
ch	106	Communications	Information/Communication	53	1,2,3,4

Further Risks

Offensive content, detrimental effects on productivity, and the leaking of sensitive information.

Related categories

[Instant Messaging](#)

Consumer Protection

Websites that try to rob or cheat consumers.

Some examples of their activities include selling counterfeit products, selling products that were originally provided for free, or improperly using the brand of another company.

This category includes websites that exploit kindness or ignorance such as fraudulently collecting money for a charity, or running fraudulent investment schemes. This category also includes sites where many consumers reported being cheated or not receiving services.

This category does not include phishing, which tries to perpetrate fraud or theft by stealing account information.

Category combinations

None

Example URLs

- <http://www.top-of-software.de>
- <http://www.green-card-us.org>
- <http://www.mydiscountmeds.net>
- <http://www.groupclub.ru>

Reference information

Short Name	Category Code	Risk Group	Functional Group	Hierarchy	Category Set
cp	201	Productivity	Risk/Fraud/Crime	22	4

Further Risks

Websites in this category are a risk to liability and productivity.

Related categories

None.

Content Server

URLs for servers that host images, media files, or JavaScript for one or more sites and are intended to speed up content retrieval for existing web servers, such as Apache.

Content servers generally do not have content posted or through-site navigation for web surfers. Content servers hosting images do not allow users to browse the photographs.

This category includes domain-level and sub-domain-level URLs that function as content servers.

This category does not include:

- Web pages for businesses that provide the content servers
- Web pages that allow users to browse photographs. See the Media Sharing category.
- URLs for servers that serve only advertisements. See the Web Ads category.

Category combinations

This category can be used with the Media Downloads and Streaming Media categories to cover sites that have bandwidth risks.

Example URLs

- <http://img.avatars.yahoo.com>
- <http://us.ent3.yimg.com>
- <http://images.bestbuy.com>
- <http://a1568.g.akamai.net>

Reference information

Short Name	Category Code	Risk Group	Functional Group	Hierarchy	Category Set
is	177	Information	Information Technology	103	1,2,3,4

Further Risks

None.

Related categories

[Media Sharing](#), [Web Ads](#)

Controversial Opinions

Web pages that contain opinions that are likely to offend political or social sensibilities and incite controversy. Much of this content is at the extremes of public opinion.

Examples include suicide pacts, pro-anorexia, xenophobic, ethnocentric, fundamentalist viewpoints, disinformation, or critical examination of one group of people.

This category does not include opinion or language clearly intended to promote hate or discrimination.

Category combinations

This category can be used with Blogs/Wiki.

Category Descriptions

Alphabetical list of category descriptions

Example URLs

- <http://www.proanamia.com>
- <http://the-muslim-question.blogspot.com>
- <http://www.evilbible.com>
- <http://www.rense.com>

Reference information

Short Name	Category Code	Risk Group	Functional Group	Hierarchy	Category Set
co	198	Proprietary	Lifestyle	58	3

Further Risks

None.

Related categories

[Blogs/Wiki](#), [Discrimination](#)

Dating/Personals

Web pages that provide networking for online dating, matchmaking, escort services, or introductions to potential spouses.

This category includes sites that provide personal or group profiles, and allow their members to interact through real-time communication, message posting, public bulletins, and media sharing.

This category does not include sites that provide social networking that might include dating, but are not specific to dating. See the Social Networking category.

Category combinations

- If the site contains pages that allow a person to chat, leave or read messages on a forum, or participate in media sharing, the site is in the Chat, Forum/Bulletin Boards, and Media Sharing categories.
- When the site's home page contains content considered to be provocative attire or sexual materials, these sites are in the Provocative Attire or Sexual Materials categories.
- Sites that often contain pornographic images are also in the Pornography category.

Example URLs

- <http://www.match.com>
- <http://www.eharmony.com>
- <http://www.dating.com>
- <http://www.loveme.com>

Reference information

Short Name	Category Code	Risk Group	Functional Group	Hierarchy	Category Set
dp	192	Propriety	Lifestyle	50	2,3,4

Further Risks

Sites in this category might also enable contact with undesirable parties and member profiles that contain objectionable information.

Related categories

[Social Networking](#), [Chat](#), [Forum/Bulletin Boards](#), [Media Sharing](#), [Provocative Attire](#), [Sexual Materials](#), [Pornography](#)

Dating/Social Networking

Web pages that focus on social interaction such as online dating, friendship, school reunions, pen-pals, escort services, or introductions to potential spouses.

This category includes many sites that allow their members to socially interact through real-time message posting.

This category does not include wedding-related content, dating tips, or related marketing.

Category combinations

None

Example URLs

- <http://www.loveme.com>
- <http://www.classmates.com>
- <http://personals.yahoo.com>

Reference information

Short Name	Category Code	Risk Group	Functional Group	Hierarchy	Category Set
mm	127	Propriety	Lifestyle	51	1

Further Risks

Sites in this category might also enable contact with undesirable parties and member profiles that contain objectionable information.

Related categories

[Dating/Personals](#), [Chat](#), [Social Networking](#)

Digital Postcards

Web pages that allow people to send and receive digital postcards and greeting cards via the Internet.

Digital postcards give messages of greeting or sentiment, usually for special occasions such as birthdays and holidays.

Category combinations

Some site directories are in additional categories for flexibility in allowing or blocking. For example, some digital postcard sites have a specific adult humor directory that might also be in the categories of Sexual Materials or Nudity.

Example URLs

- <http://www.halloweenegreetings.com>
- <http://www.aruba-ecards.com>
- <http://www.felicitaciones-animadas.com>
- <http://www.americangreetings.com>

Reference information

Short Name	Category Code	Risk Group	Functional Group	Hierarchy	Category Set
dc	189	Communications	Information/Communication	73	1,2,3,4

Further Risks

These sites might also raise concerns about leaking sensitive or proprietary information, objectionable content, malware, or harmful file attachments.

Related categories

[Sexual Materials](#), [Nudity](#)

Discrimination

Web pages, which McAfee believes provide information that explicitly encourages the oppression or discrimination of a specific group of individuals.

This category includes promoting an agenda against groups based on race, religion, nationality, gender, age, disability, or sexual orientation. This category might include political parties and organizations with a specific hate-based agenda, and cyber-bullying where it is extreme.

This category does not include jokes and humor, unless the focus of the entire site is considered discriminatory.

Category combinations

None

Example URLs

- <http://www.stormfront.org>
- <http://raceandreason.110mb.com>
- <http://www.kkkk.net>
- <http://www.chimpout.info>

Reference information

Short Name	Category Code	Risk Group	Functional Group	Hierarchy	Category Set

Further Risks

None.

Related categories

[Humor/Comics](#)

Drugs

Websites that provide information on the purchase, manufacture, and use of illegal or recreational drugs.

This category includes displaying, selling, or describing the use of drug paraphernalia, and tips on legal highs, such as glue sniffing, the misuse of prescription drugs, or the abuse of other legal substances.

This category does not include sites with exclusive health or political themes.

Category Descriptions

Alphabetical list of category descriptions

Category combinations

If sites contain multiple themes, they might be in other categories. For example, sites with obviously illegal tips on steroid use might also be in the Potential Criminal Activities category.

Example URLs

- <http://www.hightimes.com>
- <http://www.hempfiles.com>
- <http://www.ganjakits.com>

Information Security

Web pages that legitimately provide information about data protection.

Category Descriptions

Alphabetical list of category descriptions

This category includes detailed information for safeguarding business or personal data, intellectual property, privacy, and infrastructure on the Internet, private networks, or in other bandwidth services such as telecommunications.

This category does not include:

- Legitimate information security companies and security software providers, such as virus protection companies.
- Sites that intend to exploit security or teach how to bypass security. See the Potential Hacking/Computer Crime category.

Category combinations

Potential Hacking/Computer Crime

Note: Sites with a high risk content and no clear distinction between “black hat” and “white hat” might also be in this category, and the Potential Hacking/Computer Crime category.

Example URLs

- <http://www.astalavista.com>
- <http://www.bright-shadows.net>
- <http://www.petitcolas.net/fabien/steganography/index.html>

Malicious Downloads

Web pages that allow a user to inadvertently download code that is harmful or annoying.

Category Descriptions

Alphabetical list of category descriptions

This category includes downloadable files like screensavers, toolbars and file-sharing programs that contain adware, spyware, viruses and other malicious computer code. Sometimes, the malware is added without the user's knowledge, as when they click "Yes" or "I agree" without reading the full terms and conditions. The effects can include slower computer speeds, theft of passwords, and the loss or damage of valuable personal files.

Category combinations

None

Example URLs

Caution: For security, no examples are given.

Reference information

Short Name	Category Code	Risk Group	Functional Group	Hierarchy	Category Set

Related topics

[Spyware/Adware/Keyloggers](#), [Browser Exploits](#), [Malicious Sites](#)

Malicious Sites

Web pages that deploy code designed specifically to hijack your computer's settings or activity.

This category includes self-installing applications (called "drive-by" executable file downloads), Trojan horses, and viruses that exploit security vulnerabilities in browsers or other applications. A web page can later lose its malicious status and be moved to another category.

This category does not include spyware/adware because of its intent. Spyware/adware covertly gathers and sends information to another party. Malicious sites intend to take action on another computer to cause damage. This category does not include browser exploits and malicious downloads, which are in separate categories.

Category combinations

None

Example URLs

Caution: For security, no examples are given.

Motor Vehicles

Websites for manufacturers and dealerships of consumer transportation vehicles, such as cars, vans, trucks, SUVs, motorcycles, and scooters.

This category also includes sites that provide product marketing, reviews, comparisons, pricing information, auto fairs, auto expos, and general consumer information about motor vehicles.

This category does not include automotive accessories, mechanics, auto-body shops, and recreational hobby pages. This category does not include sites that provide business-to-business-only content regarding motor vehicles.

Category combinations

Sites that sell or auction cars online are also in the Auctions/Classifieds and Online Shopping categories.

Non-Profit/Advocacy/NGO

Web pages from charitable or educational groups that fulfill a stated mission, benefiting the larger community, such as clubs, lobbies, communities, non-profit organizations, labor unions, and advocacy groups.

Examples are Masons, Elks, Boy and Girl Scouts, or Big Brothers.

This category includes organizations with governmental endorsements, but not government-run organizations.

Nudity

Web pages that have non-pornographic images of the bare human body.

This category includes classic sculpture and paintings, artistic nude photographs, some naturism pictures, and detailed medical illustrations.

This category does not include high-profile sites where nudity is not a concern for visitors. See the Incidental Nudity category.

Category combinations

Some URLs might be in other categories to allow for exceptions, such as Art/Culture/Heritage, Education/Reference, or Health.

Example URLs

Online Shopping

Web pages that sell products or services online.

Web pages selling a broad range of products might pose a risk to users by offering access to items that are normally in other categories such as Pornography, Weapons, Nudity, or Violence. Web pages selling such content exclusively are in their respective categories.

Category combinations

Many categories assume their corresponding URLs provide online shopping. Therefore, those URLs are not included in the Online Shopping category. Such categories are:

- Alcohol
- Anonymizers
- Anonymizing Utilities
- Auctions/Classifieds
- Content Server
- Discrimination
- Drugs
- Finance/Banking
- For Kids
- Gambling
- Incidental Nudity
- Instant Messaging

Related categories

[Pornography](#), [Weapons](#), [Nudity](#), [Violence](#)

P2P/File Sharing

Web pages that allow the exchange of files between computers and users for business or personal use, such as downloadable music.

P2P clients allow users to search for and exchange files from a peer-user network. They often include spyware or real-time chat capabilities.

This category includes BitTorrent web pages.

Category combinations

None

Example URLs

Further Risks

URLs in this category can cause bandwidth risks.

Related categories

[Media Sharing](#)

Parked Domain

Web pages that once served content, but their domains have been sold or abandoned and are no longer registered.

Parked domains do not host their own content, but usually redirect users to a generic page that states the domain name is for sale, or redirect users to a generic search engine and portal page, some of which provide valid search engine results.

Category combinations

Parked domain URLs are in other categories only if the domain title or terms clearly indicate that it will contain a specific type of content, such as pornography.

Example URLs

- <http://www.illusionsworld.com>
- <http://www.passwordscenter.com>

Politics/Opinion

Web pages covering political parties, individuals in political life, and opinion on various topics.

This category might also cover laws and political opinion about drugs. This category includes URLs for political parties, political campaigning, and opinions on various topics, including political debates.

Category combinations

- A URL such as www.whitehouse.gov is in the Government/Military category. However, a presidential site promoting the presidential agenda or campaign (such as a political blog) is in the categories of Politics/Opinion and Blogs/Wiki.
- If the content promotes discrimination, it is also in the Discrimination category.

Example URLs

- <http://www.chomsky.info>

Religion/Ideology

Web pages with content related to religious topics and beliefs in human spirituality that are not within the major religions.

This category includes religious discussion, beliefs, articles, and information for local congregations or groups such as a church homepage, unless the site is already in the Major Global Religions category. This category also includes comparative religion, or sites that include religions and ideologies.

This category does not include astrology and horoscope sites. See the Entertainment category. Traditional, popular, global religions are in the Major Global Religions category.

Category combinations

- Internet radio with a religious focus is in this category and Internet Radio/TV.

Sports

Web pages related to professional or organized recreational sports.

This category includes sporting news, events, and information such as playing tips, strategies, game scores, or player trades.

This category does not include fantasy leagues, sports centers, athletic clubs, fitness or martial arts clubs, and non-league billiards, darts, or other such activities. See the categories, Entertainment or Games.

Category combinations

- If the site focuses on sports scores, tips, or strategies but offers online purchasing of sports paraphernalia, the site might be in the Online Shopping category. However, if the site primarily sells sports products, it is only in the Online Shopping category.
- Some sports involve excessive combat or competition that is violent. If their web pages contain violent images or media, the web pages are also in the Violence category. For example, www.ufc.com is in the categories of Sports and Violence. If the web page is primarily non-violent content, it is in the Sports category only.

Example URLs

- <http://www.nfl.com>
- <http://www.espn.go.com>
- <http://www.sportsline.com>

Spyware/Adware/Keyloggers

Web pages that violate personal or corporate privacy and security.

This category includes:

- URLs that download software or execute programs that gather user information and send it to a third party without the user's explicit knowledge or consent.
- Software that monitors or tracks activity on others' computer by recording the key strokes (Keyloggers).
- Sites that distribute software known to contain spyware or adware.

This category is different from the Malicious Sites category because of its intent. Spyware and keyloggers covertly gather and send information to another party. A malicious site intends to install software or take an action without user approval or knowledge.

This category does not include web pages that download Potentially Unwanted Programs (PUPs).

Category combinations

None

Example URLs

Caution: For security, no examples are given.

Reference information

Short Name	Category Code	Risk Group	Functional Group	Hierarchy	Category Set
sy	150	Security	Risk/Fraud/Crime	14	4

Further Risks

None.

Related categories

Malicious Sites, PUPs

Stock Trading

Web pages that offer purchasing, selling, or trading of shares online.

This category also includes ticker-tape information that enables viewing of real-time stock prices and financial spread betting in the stock market. Other betting is in the Gambling category.

This category does not include sites that offer information about stocks, but do not offer purchasing, selling, or trading of shares. See the Finance/Banking category.

Category combinations

- Fantasy stock trading is in the categories of Games and Stock Trading because it often uses real stock information.
- URLs that provide streaming stock tickers are in the categories of Stock Trading and Streaming Media.

Example URLs

- <http://www.etrade.com>
- <http://www.tdameritrade.com>
- http://www.nasdaq.com/services/nasdaq_toolbar.stm

Related categories

Gambling, Finance/Banking, Games, Streaming Media

Streaming Media

Web pages that provide streaming media, or contain software plug-ins for displaying audio and visual data before the entire file has been transmitted.

This category does not include audio or video files that are downloaded to a user's computer before being played. See the Media Downloads category.

Category combinations

- If a web page offers both downloadable and streaming media, it is in both the Media Downloads and Streaming Media categories.
- URLs in this category might also be in other categories because of their risk to bandwidth.
- URLs that provide streaming stock tickers are in the categories of Stock Trading and Streaming Media.

Example URLs

- <http://www.mp3.com>
- <http://www.beatboxbattle.net>
- http://www.video.csupomona.edu/streaming/NASA/nasa_index.html

Technical/Business Forums

Web pages with a technical or business focus that provide online message posting or real-time chatting, such as technical support or interactive business communication.

Although users can post any type of content, these forums tend to present less risk of containing offensive content.

Sites that offer a variety of forums with themes, including technical and business content, are only in the categories of Forum/Bulletin Boards or Chat. Forums with a primary technical or business focus only are in the Technical/Business Forums category.

Category combinations

None

Example URLs

Technical Information

Web pages that provide computing information with an educational focus in areas such as Information Technology, computer programming, and certification.

Examples include Linux user groups, UNIX commands, software tutorials, or dictionaries of technical terms. Most sites in this category might be subdirectories of larger domains. For example, a software site with a tutorial page is in this category only at the tutorial page URL.

This category does not include content about information security. See the Information Security category.

Category combinations

If these sites contain message posting, they might also be in the Technical/Business Forums category.

Category Descriptions

Text/Spoken Only

Content that is text or audio only, and does not contain pictures.

This category can be used as an exception to allow explicit text and recorded material to be accessed when you want pictures blocked using the Pornography, Violence, or Sexual Materials categories. Libraries or universities can use this category to prevent the display of offensive graphics in their public facilities.

Category combinations

- Pornography
- Violence
- Sexual Materials

Example URLs

Text Translators

Web pages that allow users to type phrases or a block of text to translate it from one language into another.

This category also includes language identifier web pages.

Category Descriptions

Alphabetical list of category descriptions

This category does not include URL translation, which is a different activity. URL translation translates the content of a web page, not a word, phrase, or block of text typed into an input field. URL translation is in the Anonymizing Utilities category.

Category combinations

Sites that offer **both** text translation and URL translation might be in the categories of both Text Translators and Anonymizing Utilities.

Example URLs

- <http://babelfish.yahoo.com>
- <http://translation.langenberg.com>
- http://translate.google.com/translate_t
- http://www.worldlingo.com/en/products_services/worldlingo_translator.html

Weapons

Web pages that provide information about buying, making, modifying, or using weapons, such as guns, knives, swords, paintball guns, and ammunition, explosives, and weapon accessories.

This category also includes sites that contain content for:

- Weapons for personal or military use.
- Homemade weapons.
- Non-lethal weapons, such as mace, pepper spray, or Taser guns.

Category Descriptions

Alphabetical list of category descriptions

- Weapons facilities, such as shooting ranges.
- Government or military oriented weapons.

This category does not include political action groups, such as the NRA. See the Politics/Opinion category.

[Politics/Opinion](#), [Violence](#)

Web Ads

Web pages that provide advertisement-hosting or programs that create advertisements.

Examples include links, source code or applets for banners, popups, and other kinds of static or dynamically generated advertisements that appear on web pages. This category is intended to block advertisements on web pages, not the companies that provide the advertisements or advertising services.

This category does not include aggressive advertising adware. See the Spyware/Adware category.

Category combinations

None

Web Mail

Web pages that enable users to send or receive email through the Internet.

Category combinations

None

Example URLs

- <http://mail.live.com>
- <http://mail.yahoo.com>
- <http://mail.lycos.com>

Reference information

Short Name	Category Code	Risk Group	Functional Group	Hierarchy	Category Set
wm	156	Communications	Information/Communication	71	1,2,3,4

Further Risks

These sites can expose users to harmful content delivered by email file attachments, or might present a security risk such as leaking or loss of proprietary data.

Related categories

None.

Web Meetings

Web pages that host live meetings, video conferences, and interactive presentations mainly for businesses.

Web meetings generally include streaming audio and video, and allow data transfer or office-oriented application sharing, such as online presentations.

For web-meeting sites that offer features not used in the web meeting, such as remote access or browser-based office suites, the individual URLs are in various categories. For example:

Web page	Category
Web meeting with browser-based office suite features	Web Meetings
Browser-based office suite provided as a separate feature	Interactive Web Applications
Web meeting with remote-access features	Web Meetings
Remote access provided as a separate feature	Remote Access

Category combinations

None.

Further Risks

URLs in this category can present bandwidth risks, and security risks such as the loss or leakage of proprietary data.

Related categories

[Interactive Web Applications](#), [Remote Access](#)

Web Phone

Web pages that enable users to make telephone calls via the Internet or obtain information or software for this purpose.

Web Phone service is also called Internet Telephony, or VoIP. Web phone service includes PC-to-PC, PC-to-phone, and phone-to-phone services connecting via TCP/IP networks.

Category combinations

Many instant-messaging applications also provide phone service, therefore, they might also be in the Instant Messaging category.

Example URLs

- <http://www.net2phone.com>
- <http://www.aimphoneline.com>
- <http://www.buddytalk.com>
- <http://www.skype.com>

Reference information

Glossary

A

adware	A software application, usually integrated into a program or bundled with a program, that periodically pops up advertisements on a computer. The application collects marketing data when a user types keywords into a search engine or visits a website. Using the marketing data, the adware targets popup advertisements to the individual user. Some adware programs can include spyware.
anti-virus	Software that tries to identify, thwart, and eliminate computer viruses and other malicious software.
authentication	A process that verifies the identity of a person or system before allowing access to a network system or service.

B

bandwidth	The capacity of a communications link, usually expressed in terms of how much data can pass through the link in a given time; for example, 100 Mbps, or megabits per second.
blocking	When using web filtering, it is the selection that restricts access to a specific site.
botnet	Network of remotely controlled systems used to coordinate attacks and distribute malware, spam, and phishing scams. Bots (short for robots) are programs that are covertly installed on a targeted system allowing an unauthorized user to remotely control the compromised computer for malicious purposes.

C

categories	URLs that are group together based on the website type that the TrustedSource Web Database identifies.
category code	A three-digit code used in the SDK to identify a category. This code is useful for OEMs and programmers.
category set	A group of categories in the TrustedSource Web Database.
Control List	See TrustedSource Web Database .

D

deploy	In SmartFilter, this command instructs the administration server to install the latest configuration to the plug-in or authentication server.
---------------	---

F

filter	Software that allows or blocks access to the Internet.
FTP (file transfer protocol)	A protocol used on the Internet for transferring files.
FTP site	An Internet site that hosts directories and files that you can browse and copy to your system using the file transfer protocol (FTP).
functional group	Used in the McAfee Web Gateway interface for category selection, this group organizes similarly named categories and to make finding them easier.

H

hierarchy	The importance of a category within the database. A lower number is most important, and a higher number is least important.
home page	The first page you see when visiting a website.
HTML (HyperText Markup Language)	A simple programming language used to create web documents. Hypertext uses special links that you can click to jump from one related topic to another.
HTTP (Hypertext Transfer Protocol)	An agreed-upon format (protocol) that requests and transfers HTML documents on the World Wide Web.
HTTPS (HyperText Transfer Protocol-Secure)	An agreed format (protocol) that securely requests and transfers HTML documents on the World Wide Web.

I

IIS (Internet Information Server)	An Internet file and application server that is included with the Microsoft Windows NT server and Windows 2000 server operating systems.
Internet Database	See TrustedSource Web Database .
IP address	A 32-bit address that uses standard dotted quad notation assigned to TCP/IP network devices. An IP address is unique to each computer on the Internet.
ISP (Internet Service Provider)	A company that provides individuals and companies access to the Internet and other related services such as website building and virtual hosting. An ISP has the equipment and the telecommunication line access required to have a point-of-presence (POP) on the Internet for the geographic area served.

L

logon ID	Also known as a user name. When used with a password, is a means of authentication to start a session with a computer system.
-----------------	---

M

malware	Malicious software designed to carry out annoying or harmful actions. Malware often masquerades as useful programs or is embedded into useful programs so that users are induced into activating them. Malware can include viruses, worms, and spyware.
----------------	---

O

off-line	State of a computer when it is not connected to another device.
on-line	State of a computer when it is connected to another device.
OS (Operating System)	The master control program that works like a traffic policeman to keep everything flowing smoothly inside your computer.

P

phishing	A scamming technique that uses spam or popup messages to deceive people into disclosing credit card numbers, bank account information, social security numbers, passwords, or other sensitive information. Internet scammers use email as bait to "phish" for passwords and financial data from Internet users.
policy	Rules and regulations that determine the type of information resources that users can access via the Internet. Policies in the McAfee web products help to manage Internet access.
protocol	Rules by which one entity communicates with another, especially over a network. This is important when defining rules by which clients and servers communicate with each other over a network. Important protocols become published, standardized, and widespread.

R

risk group Identify the primary risks associated with a category of URLs. Risk Groups are: Bandwidth, Communications, Information, Liability, Productivity, Propriety, Security.

S

short name A two-letter code that identifies the category used in the SmartFilter Administration Console when creating policies and patterns.

stand-alone Refers to a device or software program that is self-contained, that is, one that does not need any other device or software program to function.

SmartFilter Internet Database See [TrustedSource Web Database](#).

spam Unsolicited commercial email that advertises products, services, and websites. Spam can also be used to deliver malware and other cyber threats.

spoofing The creation of a fraudulent website that mimics a well known website, intended to fool users into believing they are connected to a trusted site. Email spoofing occurs when the sender address and other parts of an email head are altered.

spyware A form of malware installed without the user's knowledge to track and/or transmit data to an unauthorized third-party.

T

Trojan horse A computer program that conceals harmful code. It usually masquerades as a useful program that a user might want to execute.

TrustedSource A global threat correlation engine and intelligence base that follows trends in email, web traffic, and malware, and assigns web reputation ratings. TrustedSource also has a tool to verify if a site is included in the most current version of the TrustedSource Web Database.

TrustedSource.org A website that provides an enhanced URL-checking tool that provides status, category, and web reputation information for each URL. This website also accepts suggestions for changes of categories for a single URL or multiple URLs.

TrustedSource Web Database The database that contains millions of Internet sites grouped by category and web reputation.

U

URL The Uniform Resource Location (URL) provides the address of a specific document or page on the web. The URL indicates the protocol, name of the domain, directory, and specific document.

Example: ftp://www.website.com/home/index.html

- **Protocol** – ftp
- **Domain** – website
- **Directory** – home
- **Document or page** – index.html

user (end user) A collection of specific data elements that identify the user to the system, define the resources to which the user has access, the administrative group to which the user belongs, and the user's role within a network structure.

V

virus A program that infects computer files, usually executable programs, by inserting a copy of itself into the file. These copies are usually executed when the infected file is loaded into memory, allowing the virus to infect other files. A virus requires human involvement (usually unwittingly) to propagate.

W

web page	A document or single page in a website that is identified by a unique URL.
web reputation	A score, created by TrustedSource, that indicates to what level a website can be trusted.
website	A collection of web pages, that includes a home page, and is usually owned by an individual or organization.
worm	An independent computer program that reproduces by copying itself from one system to another across a network. Unlike computer viruses, worms do not require human involvement to propagate.
